

Diffusion Panels

Diffusion Panels

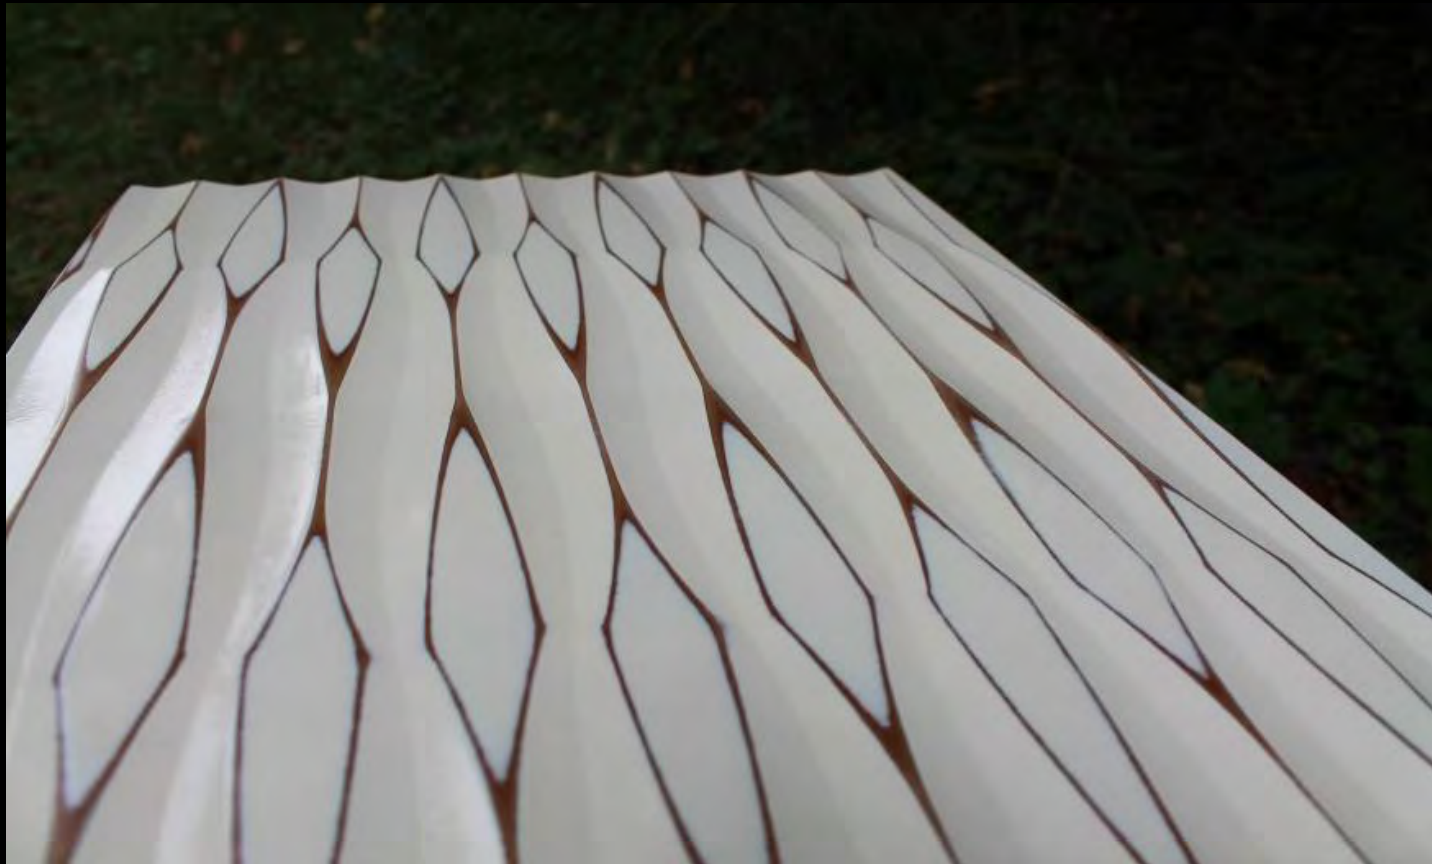

Diffusion Panels are manufactured by Lambri and exclusively presented by Eomac. Diffusion Panels are engineered to modify interior spaces by changing the way sound travels within a room. Sound waves are scattered in different directions at various angles. Eomac Diffusion Panels are constructed from MDF and real wood veneers. Finishes are available in 40 wood species, natural, stained or coloured to match any Pantone, RAL or NCS reference.

Diffusion Panels

Designing with natural wood creates timeless, beautiful and inviting spaces. Eomac Diffusion Panels are an environmentally responsible choice. Cutting-edge production methods are Eco-friendly. MDF core material has no added urea formaldehyde. All veneers are from sustainable forests. Diffusion Panels qualify for LEED, BREEAM, HQE and DGNB environmental credits.
