

in-VISIBLE™

illuminated
pre-show & post-show
acoustic graphics for cinemas

eomac in-VISIBLE Inc. Introduces a breakthrough technology - a unique concept in illuminated graphic display units for application on the interior walls of cinemas. The lighted graphic displays completely disappear when the house-lights go down and the movie starts to roll.

how it works

Before and after the feature presentations, LEDs illuminate the image, creating an eye-catching, vivid and colourful presentation to complement the onscreen pre-show and the cinema environment. When the movie starts, the LEDs dim and the unique construction allows images to completely disappear and retreat from audience's line of sight.

opportunity

It is now possible for cinema walls to generate revenue, or become an artistic production to amaze moviegoers without distraction to feature presentation. in-VISIBLE™ offers endless possibilities:

- advertising
- sponsorship
- branding
- promotion
- design & decoration
- enhancing the ambiance
and more...

standard & custom sizes

in-VISIBLE™ comes in four standard sizes:

- 2.0 m x 2.7 m (nominal 6'-6" x 9')
- 1.0 m x 2.7 m (nominal 3'-3" x 9')
- 1.5 m x 2.0 m (nominal 5' x 6'-6")
- 1.5 m x 1.5 m (nominal 5' x 5")

Ideal for horizontal and vertical applications.

Custom sizes are available on request.

features

- full control over display content
- 100,000-hour LED lifespan
- quick and easy installation
- no compromise to acoustics
- no visual distraction

- ideal for new-build and existing construction

in series

High-resolution graphics incorporating fabrics as the visual medium. **eomac** in-VISIBLE Inc. offers a unique range of interior display solutions:

- in-VISIBLE™
- in-LIGHT™
- in-FOCUS™

Contact us for more information.

wall applications

in-VISIBLE™ creates a medium to utilise the unused wall surface within cinema environments, and other low-ambient-light entertainment areas, through a patent-pending technology in illuminated display hardware.

under screen applications

The “non-glare” and acoustic cinema performance of in-VISIBLE™ in both on and off positions ensures no unwanted acoustic or visual distraction on the side walls, under the screen or around the screen.

design & lobby applications

in-LIGHT™ is a state-of-the art high resolution illuminated fabric acoustic display. in-LIGHT™ makes a great application in lobbies, corridors, and entrance areas in all types of entertainment, retail and hospitality spaces.
